

Partner: AVS Electronics

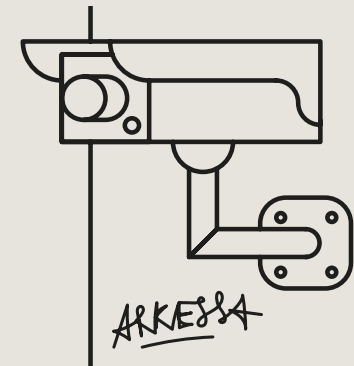

Sector: Security Solutions

Solution: Global 4G connectivity

# Smart Security with real-time data analysis

**Smart security solutions including connected cameras, behavioural biometrics, and Smart Lighting solutions are revolutionising the ways in which we keep ourselves and our properties safe, while helping facilities managers and local authorities to save time and money.**

Access to real-time data and a reliable connection that is easy and cost-effective to install are both important components for a successful security solution deployment.

**4G  
LTE**  
GLOBAL  
CONNECTIVITY

## Flexibility and enhanced data security

Arrow Electronics brought together Arkessa and AVS Electronics in a partnership designed to ease the deployment, installation, and connection of the AVS Electronic Security Alarm Panel smart application – allowing facilities managers and business owners to control and manage their alarm systems via mobile in real time, from anywhere. Available on iOS and Android, the simple and intuitive graphical interface allows users to access to all the alarm functionalities from the app quickly and easily.

Using Arkessa's global 4G connectivity solution, customer data can be transmitted safely and securely, and in real time, across the EU, Latin America and North Africa, using one single Stock Keeping Unit (SKU) number.

Arkessa provided a tailored commercial and technical solution, designed to suit the distribution model and keep deployment and installation costs to a minimum.

**Global 4G connectivity  
in EU, LATAM and North  
Africa via a single SKU number**

**Hard data caps to avoid  
unexpected overage costs**

**Security-as-a-Service –  
additional security features to  
restrict unwanted access to  
the devices and to protect  
sensitive customer data**
