ARKESSA

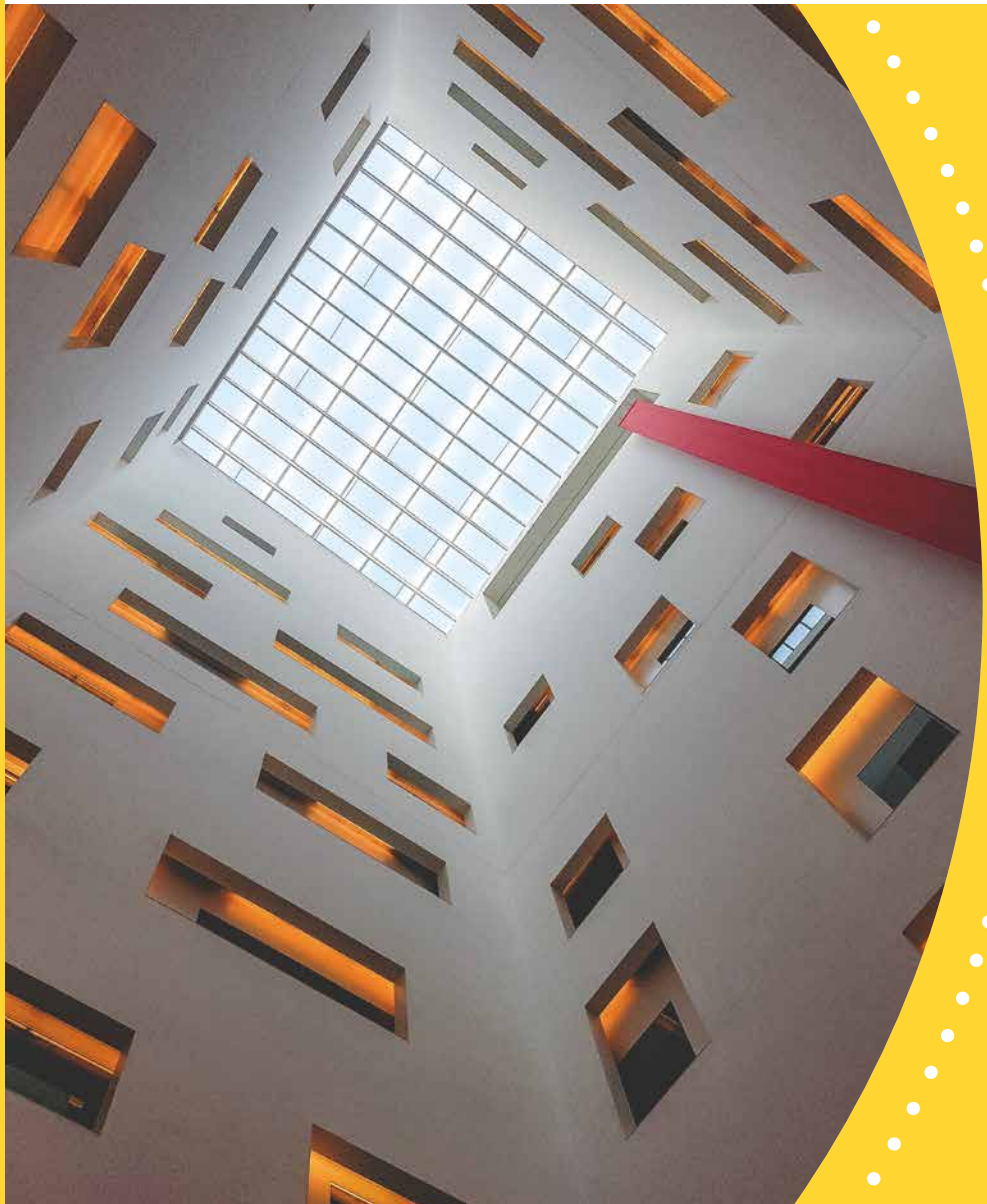
iaconnects

intel market ready

Partner: **iaconnects**

Sector: **Smart Spaces, Building Automation, Remote Maintenance**

Solution: **3G & 4G cellular WAN**



Changing the way our buildings work for us

Businesses with complex or multiple sites can find it difficult to track and manage assets to maximise building performance, including energy usage, room occupancy and maintenance requirements.

Being smarter about tracking and using assets or energy means businesses can begin to increase efficiency and reduce consumption whilst lowering costs and cutting wastage. Building control and automation technology from iaconnects provides intelligent data and diagnostics to help businesses to act on energy efficiency initiatives easily.

The fully integrated solution can enable remote management of assets, occupancy and workflows, and helps organisations to address insurance, health & safety and process compliance concerns.

3G &4G CELLULAR WAN

IoT-enabled building automation and control

The iaconnects MobiusFlow enabled Gateway allows connectivity and control of wired and wireless devices to be provisioned via a managed mobile data service.

EnOcean wireless sensors combined with the MobiusFlow software and cellular connected gateway enables faster and easier deployment. Arkessa's 3G & 4G cellular WAN simplifies system commissioning and enables secure cloud connectivity independent of local IT constraints.
